

Risk	How to handle
Not enough Budget	Avoid, by well planning from the beginning and leave margin for errors
Poor quality	Escalate, the quality team and the coders
If the customer want feature out of my business	Transfer him/her to the right department to assist him/her
Out of numbers!	Mitigate, by hiring new people and train them well on our processes
Minor issues	Accept it, nothing is perfect, and we should focus on our work
